

# HEAT STROKE BASIC FIRST AID

**FOR THE BEST CHANCE OF SURVIVAL, IT IS ESSENTIAL TO LOWER YOUR PET'S BODY TEMPERATURE GRADUALLY\***

**\*IMPORTANT - PLEASE DON'T USE LARGE QUANTITIES OF ICE OR ICY WATER.**

Move him/her to a shaded/cool area.

Immediately wet the animal with cool (not cold) water, to avoid shock. If possible, you can also use wet towels or place him/her in the breeze of a fan.

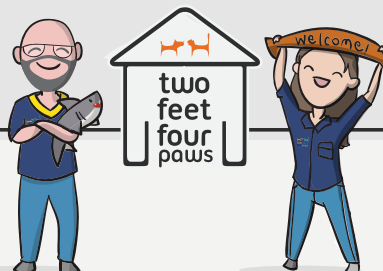

Concentrate the cooling water on head, neck and underneath the front and back legs. You can put their feet in cool water too.

Allow them to drink small amounts of cool water.

Continue to wet him/her with cool water & take him/her to the nearest vet as a matter of urgency.

**⚠ MIND THEIR FEET 🔥**

**EASY  
TEST**

Press the back of your hand (or bare foot) to the ground for 5 seconds. If it is too hot for you, it is too hot for them.
